What is the most important information I should know about ZERIT?

ZERIT can cause serious side effects, including:

- **Build-up of an acid in your blood (lactic acidosis).** Lactic acidosis can happen in some people who take ZERIT or similar medicines (nucleoside analogues). Lactic acidosis is a serious medical emergency that can lead to death.

  **Call your healthcare provider right away if you get any of the following symptoms which could be signs of lactic acidosis:**

  - feel very weak or tired
  - have unusual (not normal) muscle pain
  - have trouble breathing
  - have stomach pain with nausea and vomiting
  - feel cold, especially in your arms and legs
  - feel dizzy or lightheaded
  - have a fast or irregular heartbeat
  - weight loss

- **Severe liver problems.** Severe liver problems, including liver failure can happen in people who take ZERIT. In some cases, these liver problems can lead to death. Your liver may become large (hepatomegaly) and you may develop fat in your liver (steatosis). Taking ZERIT with medicines that contain didanosine or hydroxyurea may increase your risk for liver problems.

  **Call your healthcare provider right away if you have any of the following symptoms of liver problems:**

  - your skin or the white part of your eyes turns yellow (jaundice)
  - dark or “tea-colored” urine
  - light colored stools (bowel movements)
  - loss of appetite
  - nausea
  - pain, aching, or tenderness on the right side of your stomach area
  - swelling of your stomach
  - fever

You may be more likely to get lactic acidosis or severe liver problems if you are female, are very overweight (obese), or have been taking nucleoside analogue medicines for a long time.

- **Neurologic problems including weakness of your legs, feet, arms, or hands (motor weakness) and numbness, tingling or pain in your hands or feet (peripheral neuropathy).** Peripheral neuropathy can be common and severe, and happens more often in people who have advanced HIV-1 disease, have a history of peripheral neuropathy, or in people who take other medicines that can cause peripheral neuropathy. In some cases, symptoms of neurologic problems may continue, worsen or temporarily worsen after you stop treatment with ZERIT.

  Neurologic problems can be difficult to notice in children who take ZERIT. Ask your child’s healthcare provider for the signs and symptoms of neurologic problems in children.

- **Inflammation of your pancreas (pancreatitis)** can happen in people who take ZERIT in combination with didanosine and can lead to death.

  **Call your healthcare provider right away if you have any of the following symptoms of pancreatitis:**

  - severe stomach (abdomen) pain
  - swelling of your stomach
  - nausea and vomiting
  - fever

For more information about side effects, see “What are the possible side effects of ZERIT?”

What is ZERIT?

ZERIT is a prescription medicine that is used with other antiretroviral medicines to treat Human Immunodeficiency Virus (HIV)-1 infection.

HIV-1 is the virus that causes Acquired Immune Deficiency Syndrome (AIDS).

Do not take ZERIT if you:

- are allergic to stavudine or any of the ingredients in ZERIT. See the end of this Medication Guide for a complete list of the ingredients in ZERIT.
- take a medicine that contains didanosine.

Before taking ZERIT, tell your healthcare provider about all of your medical conditions, including if you:

- have or had liver problems, including hepatitis C virus infection
- have or had problems with your pancreas
- have or had kidney problems
- are receiving dialysis
- have or had numbness, tingling, or pain in the hands or feet (peripheral neuropathy)
- have diabetes. ZERIT for oral solution contains 50 mg of sucrose (sugar) per mL
- drink alcoholic beverages
- have diabetes mellitus. ZERIT for Oral Solution contains 50 mg of sucrose (sugar) per mL.
- have any other medical conditions
- are pregnant or plan to become pregnant. It is not known if ZERIT will harm your unborn baby.
- are breastfeeding or plan to breastfeed. Do not breastfeed if you take ZERIT. 
  - You should not breastfeed if you have HIV-1 because of the risk of passing HIV-1 to your baby.
  - It is not known if ZERIT can pass into your breast milk and if it could harm your baby. Talk with your healthcare provider about the best way to feed your baby.

Tell your healthcare provider about all the medicines that you take, including prescription and over-the-counter medicines, vitamins, or herbal supplements. Especially tell your healthcare provider if you take a medicine called hydroxyurea.

Some medicines interact with ZERIT. Keep a list of your medicines and show it to your healthcare provider and pharmacist when you get a new medicine.

- You can ask your healthcare provider or pharmacist for a list of medicines that interact with ZERIT.
- Do not start taking a new medicine without telling your healthcare provider. Your healthcare provider can tell you if it is safe to take ZERIT with other medicines.

How should I take ZERIT?
- Take ZERIT exactly as your healthcare provider tells you to take it.
- Your healthcare provider will tell you how much ZERIT to take and when to take it.
- ZERIT may be taken with or without food.
- ZERIT should be taken every 12 hours.
- Your child’s healthcare provider should give you instructions on how to give ZERIT to your child.
- Shake the bottle of ZERIT oral solution well before measuring each dose. Use the measuring cup provided by your pharmacist to give a dose of ZERIT oral solution.
- Your healthcare provider may change your dose. Do not change your dose of ZERIT without talking to your healthcare provider.
- Do not miss a dose of ZERIT. If you miss a dose of ZERIT, take it as soon as possible.
- It is important to take ZERIT on a regular schedule. The virus in your blood may increase and the virus may become harder to treat if you miss doses.
- If you take too much ZERIT, contact a poison control center or go to the nearest hospital emergency room right away.

What should I avoid while taking ZERIT?
- Avoid drinking alcohol while taking ZERIT. Alcohol may increase your risk of side effects during treatment with ZERIT.

What are the possible side effects of ZERIT?
ZERIT can cause serious side effects including:
- See “What is the most important information I should know about ZERIT?”
- Loss of body fat (lipoatrophy) from the arms, legs, or face. Loss of body fat (lipoatrophy) happens more often in people who take ZERIT than in people who take other similar HIV-1 medicines.
  Your healthcare provider will monitor you for changes in your body fat. It is important to tell your healthcare provider if you notice any changes.
- Changes in your immune system (immune reconstitution syndrome) can happen when you start taking HIV-1 medicines. Your immune system may get stronger and begin to fight infections that have been hidden in your body for a long time. Tell your healthcare provider right away if you start having new symptoms after starting your HIV-1 medicine.

The most common side effects of ZERIT include:
headache • nausea
diarrhea • vomiting
rash

These are not all the possible side effects of ZERIT. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.

How should I store ZERIT?
Capsules:
• Store ZERIT capsules in a tightly closed container at room temperature at 59°F to 86°F (15°C to 30°C). Store ZERIT capsules in a tightly closed container.

Oral solution:
• Store ZERIT oral solution in the refrigerator between 36°F to 46°F (2°C to 8°C).
• Store ZERIT oral solution in a tightly closed container.
• Throw away any unused ZERIT oral solution after 30 days.

Keep ZERIT and all medicines out of the reach of children.

General information about the safe and effective use of ZERIT.
Medicines are sometimes prescribed for purposes other than those listed in a Medication Guide. Do not use ZERIT for a condition for which it was not prescribed. Do not give ZERIT to other people, even if they have the same symptoms that you have. It may harm them. You can ask your pharmacist or healthcare provider for information about ZERIT that is written for health professionals.

What are the ingredients in ZERIT?
Active ingredient: stavudine
Inactive ingredients:
ZERIT capsules: microcrystalline cellulose, sodium starch glycolate, lactose, and magnesium stearate.
The gelatin shell contains: gelatin, titanium oxide, and iron oxide.
ZERIT for oral solution: methylparaben, propylparaben, sodium carboxymethylcellulose, sucrose, and antifoaming and flavoring agents.
